

ULTRA4- Desert Rally Raid AirFilter

ULTRA
4

- Guglatech highly recommends to oil the filter to obtain the highest filtration efficiency. Oiling the filter will not influence the air flow/speed and there will be no loss of torque nor power. An oiled Guglatech air filter will ALWAYS be more protective than a dry one;
- Use a dry filter only in case of dust free riding;
- It is compulsory to oil the filter in case of DUST, OFF-ROAD, DESERT OR ADVENTURING;
- Guglatech recommends only Rock Oil Factory Eco Foam. Its properties and compatibility with our matrix have no equals;
- For normal street use, we recommend servicing every 30-40.000 km maximum. In case of frequent Heavy Off-Road and dusty conditions, service the filter before 20.000 km;
- If your Guglatech Air Filter arrived with the Tag "DESERT READY" it is already ready for the most intense use, no need to re-oil it.

You can find all this and more info in our youtube channel and instruction page.

ULTRA4 e SUPER4 - Maintenance:

- Gently tap the filter, dirty face down, with your hand to free all the big debris, sand/dust/dirt on the surface;
- Prepare a basin with clean lukewarm water and a few drops of non-aggressive detergent, like dish washing soap, non-aggressive home grease remover, etc;
- Let the filter sink in the water and let it rest for some minutes;
- Move around the filter to help the water to flow through it;
- Flush with fresh water following the counter air flow: from clean side toward dirty side;
- Repeat the operation until the filter matrix looks clean

SUPER4- Sport Production Air Filter

SUPER
